Education

University of Ottawa • Ottawa, ON *Graduation: December 2026*

Bachelor of Applied Science, Computer Engineering | Dean's Honor List (x2)

- **Relevant Coursework:** Data Structures & Algorithms, Computer Networks, Operating Systems, Distributed Systems, Computer Architecture

Technical Skills

- **Languages:** Java, C++, Go, Python, TypeScript, JavaScript, C#, SQL, PowerShell
- **Frontend:** React, Next.js, TypeScript, Tailwind, HTML/CSS, Server-Sent Events, REST integration, component design
- **Cloud & DevOps:** AWS, EKS, Docker, Kubernetes, Helm, GitHub Actions, CI/CD, Linux, containers, microservices
- **Messaging:** MQTT, AMQP, JMS, WebSocket, Kafka, event-driven architecture, publish/subscribe
- **Observability & Data:** Prometheus, Grafana, Micrometer, CloudWatch, PostgreSQL, Oracle SQL, DuckDB (embedded OLAP)
- **Testing & Security:** JUnit 5, Mockito, Testcontainers, pytest, container security, CVE remediation, SBOM
- **Tools & Practices:** Agile (Scrum, Kanban), Git, code review, Claude Code, GitHub Copilot, Cursor, Postman, OpenAPI

Experience

TrendAI (Trend Micro) • Ottawa, ON *May 2026 – Present*

Software Developer Intern - AI Security & Container Security

- Shipped a package-license feature across **2** public **REST** endpoints on a **DuckDB**-backed **Go** API and **React** inventory UI.
- Built a **firstDetected** date-range filter on the vulnerability endpoints and **React** UI, resolving timezone and bound edge cases.
- Cleared **81** distinct **CVEs** across four service images by bumping **Go** stdlib, **OpenSSL**/libcrypto, and `x/crypto` .
- Recovered **$6–9K/month** in **AWS** spend by tracing a **1.4B**-call API Gateway spike to **55** orphaned **CloudFormation** stacks.
- Deployed **Helm** manifests setting **Kubernetes** CPU/memory limits for the admission-controller and policy-operator on **EKS**.
- Automated **Cosign** image signing in **GitHub Actions CI/CD**, hardening a forked action against path-traversal on image refs.

Solace • Ottawa, ON *September 2025 – December 2025*

Support Engineer Intern

- Debugged distributed **event-driven** messaging and **REST**/**WebSocket** API issues across **AWS**, **Azure**, and **GCP**.
- Partnered with R&D to reproduce event broker defects and ship validated fixes for enterprise **publish/subscribe** systems.
- Supported enterprise customers running event-driven platforms on **AWS**, **Azure**, **GCP**, and **Kubernetes**, reducing escalations.
- Provided technical expertise during **incident management** and troubleshooting, authoring postmortems tracing root causes.

Natural Resources Canada • Ottawa, ON *May 2024 – August 2025*

Software Developer Intern

- Automated Salesforce sandbox refresh with **Apex**, Salesforce CLI, and **PowerShell** scripting, replacing manual setup steps.
- Optimized **Oracle SQL** reporting queries and dashboards by restructuring joins and adding indexed views, cutting runtime **30%**.
- Built a **C#** bulk import tool automating Salesforce field mapping and resolving scientific notation edge cases in legacy data.

Projects

Transaction Ledger Service — Event-Driven Banking Platform [GitHub] **2026**

- Built an event-driven ledger in **Java 21** and **Spring Boot**; a REST API returns 202 and a **Kafka** consumer posts balances.
- Keyed the topic by account ID across **3 partitions** for ordering, with manual offsets, backoff retries, and **DLT** replay.
- Turned **at-least-once** delivery into **effectively-once** processing with idempotency keys and a processed-state guard.
- Proved ordering, exactly-once effect, and DLT replay with **31 Testcontainers** tests gated by **GitHub Actions** CI.
- Instrumented **Prometheus** for p99 latency and lag with a **Grafana** dashboard; streamed **SSE** to a **React** frontend.

Tinted — Full-Stack Skin Tone Analysis Service [GitHub] **2026**

- Shipped a **FastAPI** backend of 8 **REST** routes with a **React 19** and **Next.js** frontend on Vercel, API on Render.
- Streamed a **7-stage** image pipeline to the browser over **SSE** from a worker thread, reporting each stage live.
- Protected paid APIs with a **sliding-window** rate limiter and a **fail-closed** daily spend cap metering token usage.
- Covered the pipeline with a **146**-test **pytest** suite and an offline harness scoring accuracy in 3 lighting sets.

Leadership

IEEE Women in Engineering, University of Ottawa • Ottawa, ON *September 2024 – Present*

Vice Chair (2025–2026) — Chair (2026–2027)

- Organized a hackathon for over **100** participants and led technical workshops on Git, React, and Docker.
- Created a mentorship program connecting upper-year students with first- and second-year women in engineering.
